

## **Quickly Installation Guide**

Outdoor Wireless Bridge

2.4G & 5.8G

PJ-SMSX-166 v1.02

# 3.Bridge Ways

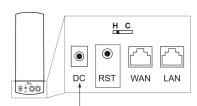

(\*Two bridge ways: One Key Bridge & LED Display Bridge, choose the way based on request.)

# **Quickly Installation Guide**

## 1. One Key Bridge

1. Config Master/ Slave CPE

Put the switch to H, CPE will work as Master. Put the switch to C, CPE will work as Slave.

\* Note: The pictures of the above products may change slightly according to the production cycle, and the final appearance is based on the physical object.

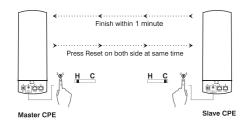

2.Point to Point Connection

Press reset button on both master and slave CPE, will start bridging

**Point to mult Point Connection** 

Press reset button on master and mult slave CPEs, will start bridging.

Note: Master CPE and slave CPE bridging actions (press reset button) need to be finished in 1 minute.

## 2.LED Display Bridge

1.Config Master CPE

When bridge two CPEs, make one work as master: press "F" to make H/ C blinking, and press "S" to change to "H", it will save automatically in 5 seconds.

2.Config Slave CPE

Set another CPE to work as slave: press "F" to make H/ C blinking, and press "S" to change to "C", it will save automatically in 5 seconds.

#### Note:

1.CPE default working mode is AP mode after reset, IP is 192.168.188.253

2.F is select button, can be used to choose master/ slave working mode, wifi channel, IP, and checking signal strength

 $3.\mbox{S}$  is config button, can be used to set master/ slave working mode, wifi channel, IP

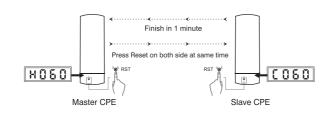

3.Point to Point Connection

Press reset button on both master and slave CPE, will start bridging.

Point to mult Point Connection

Press reset button on master and mult slave CPEs, will start bridging.

Note: Master CPE and slave CPE bridging actions (press reset button) need to be finished in 1 minute.

#### 4. Change Wifi channel

To avoid signal interference, need to change master CPE wifi channel only, slave CPE will reboot and bridge to master CPE automatically. Press F twice, change channel by press S, CPE will save and reboot automatically in 5 seconds.

#### 5.Change IP

To avoid CPE IP conflicts, need to change CPE IP address. Press F three times until the IP is blinking, press S to change IP, CPE will save and reboot automatically in 5 seconds.

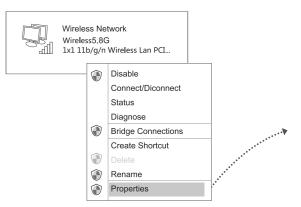

## 3.Reset method

Press reset button in 10 Seconds will reseting device

# Web Configuration

### 1.PC configuration if PC connect CPE by wireless

Set PC wireless network IP to 192.168.188.x (x: 2--250), same network segment as CPE, subnet mask: 255.255.255.0:

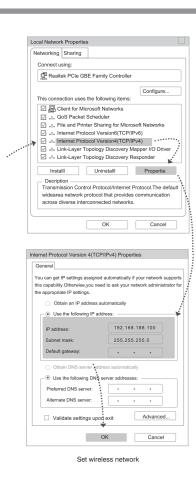

Check wireless connection

After IP address configuration, connect to CPE's wireless SSID: Wireless 5.8G, and input password (Default Password: 66666666)

Wireless 5.8G / Wireless 2.4G

5.8G product default SSID: wireless 5.8G / 2.4G product default SSID: wireless 2.4G

## 2. Login Web Configuration

Use IE browser to access http://192.168.188.253, pop up the login page shown below,input the login password: admin, enter into the home page.

#### Login Web Interface

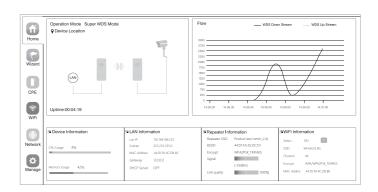

Homepage							
Home	Operation Mode Super WDS Mode © Device Location	E	Flow	— WDS Do	un Stream		
Wizard	·))(	_ 1					
CPE	(JN)						
(⊋) WiFi	Uptime:00:04:19			1915 143640 1436-6	14.36.50	93055 93760	
(#)	© Device Information	⊊ LAN Information	≅WDS Infon	mation	SWFi Infor	mation	
Network Manage	CPU Usage 4% Mersory Usage 42%	P Mode Get IP From AC Lan IP 152.168.186.253 Subnet 255.255.250 AC Address 192.188.188.1	Encrypt AP 855D AP 855D AP 855D AP 855D	Open (Bandwidth Tect) NIA NIA NIA NIA	Status SSID Charmel Encrypt MAC Address	ON Wireless 8G  44 WRA/WRAZPSK_TKERRES  44 DE SA-AC DISIO	
		MAC Address 44:D19X-4CD8:AE					

#### Setup Wizard

- ▶ Repeat mode
  Bridge the exist wireless signal then transmit Wi-Fi for more range
- ▶ AP mode
  In this mode, NAT, DHCP, firewall, and all WAN-related functions are turned off. All wireless and wired interfaces are bridged together, regardless of LAN and WAN

# 3.Bridge Status

Login CPE (work as repeater), will see signal strength, green is normal, between -70dBm to -40dBm.

## 5.Login WEB by Mobile Phone

Outdoor CPE support mobile phone Login and set, the configure page showed as follow:

#### Steps:

1.Mobile phone connect with outdoor CPE, SSID:Wireless5G, password:66666666, or please refer to product sticker for SSID, password.

2.Configure static IP

Static IP address configuration on Android Mobile Phone

Open settings in phone, turn on WLAN and find the SSID of the CPE, touch it for a long time until there is a menu, then choose "static IP" in the menu, set the mobile phone IP address as 192.168.188.X (X can not be 253 or 252), same network segment as CPE, subnet mask: 255.255.255.0, then gateway, subnet mask and domain.

Static IP address configuration on IOS Mobile Phone

Open settings and choose Wi-Fi, connect with CPE, click exclamation mark①, manual to set IP address 192.168.188.X (X can not be 253 or 252) and subnet for mobile phone, note: mobile phone's IP address should be same network segment as CPE.

3.Input 192.168.188.253 on the internet explorer bar, input admin to login the mobile configuration page.

 $\textcircled{1}. \ \textbf{Android system setup steps}$ 

②. IOS system setup steps

# 4.Channel Table

#### Wireless Bridge Regional Channel Code Instructions

Regional Code	5G Channel	
	5.180GHz	(Channel 36)
	5.200GHz	(Channel 40)
	5.220GHz	(Channel 44)
	5.240GHz	(Channel 48)
	5.260GHz	(Channel 52)
China	5.280GHz	(Channel 56)
China	5.300GHz	(Channel 60)
	5.320GHz	(Channel 64)
	5.745GHz	(Channel 149)
	5.765GHz	(Channel 153)
	5.785GHz	(Channel 157)
	5.805GHz	(Channel 161)
	5.825GHz	(Channel 165)
	5.180GHz	(Channel 36)
	5.200GHz	(Channel 40)
	5.220GHz	(Channel 44)
	5.240GHz	(Channel 48)
	5.260GHz	(Channel 52)
	5.280GHz	(Channel 56)
	5.300GHz	(Channel 60)
	5.320GHz	(Channel 64)
	5.500GHz	(Channel 100)
	5.520GHz	(Channel 104)
	5.540GHz	(Channel 108)
America	5.560GHz	(Channel 112)
America	5.580GHz	(Channel 116)
	5.600GHz	(Channel 120)
	5.620GHz	(Channel 124)
	5.640GHz	(Channel 128)
	5.660GHz	(Channel 132)
	5.680GHz	(Channel 136)
	5.700GHz	(Channel 140)
	5.745GHz	(Channel 149)
	5.765GHz	(Channel 153)
	5.785GHz	(Channel 157)
	5.805GHz	(Channel 161)
	5.825GHz	(Channel 165)

Regional Code	5G	Channel
	5.180GHz	(Channel 36)

	2.457GHz 2.462GHz	(Channel 10)
1		(Channel 11)

Please note: Default Regional Code is China

# Trouble Shooting

Trouble	Reason	Solution
Packet Latency	Nireless Interference     Distance is too long,or there are some bar between them     3.CPE's angle in wrong direction, weak signal	1.Use Wi-Fi analysis to choose the best channel, or change to 5G CPE     2.CPE should be in normal distance,and avoid bar 3.Adjust the angle of CPE according to signal strength
Wrong password	1.Forget password 2.Input wrong password 3.Too much cookie	1.Press reset button in 10 seconds to reset device, the default password is admin     2.Re-input the password     3.Clear cookie,run arp -d to clear MAC table.
Can not login WEB	1.Local IP is not in the same network segment of CPE     2.IP is taken by other devices     3.LAN Connection or Ethernet cable has problem     4.Too much cookie, MAC address haven't update	1.Ping 192.168.188.253 to see connection status     2.Stop other devices or change to another IP     3.Check LAN Connection and Ethernet cable     4.Clear cookie,run arp -d to clear MAC address
System LED light off	1.PoE power supply is not working     2.Some problem in CPE's PoE port     3.Ethernet cable is loose, RJAS port is wrong     Power current/voltage lower or wrong	Check if POE Adapter or POE switch work     Check if POE port of CPE is OK     Scheck if Ehremet cable is losse, if Ethernet cable plugged in to POE port     Check if voltage is normal, if socket has problem, if input voltage of POE adapter is normal
Low transmission Rate	1.Packet Latency     2.Ethernet cable circuit     3.Network virus attack     4.Too much access users	1.Adjust the distance, angle and channel to decrease latency     2.Check if there is circuit in the network     3.Check if port isolated to avoid network virus and broadcast storm     4.Decrease the access users.
Device always dead  1. Static electricity 2. Running time too long 3. Lightning stroke		Make CPE or POE adapter need ground connection     Running time over 7 days, reboot it     3.After lightning,device POE port broken or unstable, better to deploy lightning conductor.
